

BEBERAPA FAKTOR YANG BERHUBUNGAN DENGAN PRAKTIK IBU DALAM BERKUNJUNG KE  
POSYANDU (DI WILAYAH PUSKESMAS TANJUNG PURI KABUPATEN SINTANG PROVINSI  
KALIMANTAN BARAT)

MIMPOR -- E2A206046

(2008 - Skripsi)

Posyandu berbagai salah satu bentuk Usaha Kesehatan Berbasis Masyarakat, merupakan wujud nyata peran serta masyarakat dalam pembangunan kesehatan. Tingkat kunjungan posyandu sangat kurang ( $D/S < 50\%$ ). Tujuan penelitian ini adalah untuk menganalisis faktor yang berhubungan dengan praktik ibu dalam berkunjung ke posyandu. (*explanatory research*) dengan menggunakan metode survey dengan pendekatan *cross sectional study*. Jumlah populasi 836. Sampel dalam penelitian ini adalah 101 responden. Uji Statistik yang digunakan *chi Square*. Pengetahuan responden terhadap Posyandu baik (51,50%) Sikap mendukung posyandu (61,40%). Dukungan keluarga dalam posyandu baik (54,50%). Praktik responden dalam posyandu baik (64,40%). Ada hubungan antara status imunisasi balita dengan praktik ( $p_{value}=0,030$ ). Ada hubungan antara pengetahuan dengan praktik, ( $p_{value}=0,001$ ). Ada hubungan antara sikap dengan praktik ( $p_{value}=0,001$ ). Ada hubungan antara dukungan keluarga dengan praktik, ( $p_{value}=0,011$ ). Perlu ditingkatkan promosi program, kegiatan sasaran dan manfaat posyandu. Mengadakan program khusus untuk membina kesehatan balita yang status imunisasinya sudah lengkap, dengan pendekatan kelompok bermain dengan permainan yang bisa mendorong anak bertumbuh dan berkembang secara optimal, untuk memotivasi ibu yang mempunyai balita dengan status imunisasi sudah lengkap mau berkunjung ke posyandu. Mengadakan pelatihan kader secara berkala untuk memotivasi kader mengajak ibu-ibu ke posyandu.
